

Regulations

The federal government promulgated regulations for used oil on September 10, 1992. The regulations aim to protect human health and the environment and promote recovery of used oil.

Idaho adopted these used-oil regulations on February 11, 1994 (IDAPA 58.01.05.015). Used-oil handlers (transporters, processors, generators, and burners) are subject to all applicable spill prevention, control, and countermeasure requirements listed in the Code of Federal Regulations (CFR) Title 40 § 112 and the Underground Storage Tank Standard in 40 CFR § 280, in addition to the used-oil requirements in 40 CFR § 279. Depending on the activities your facility engages in, other regulations may apply as well.

This brochure is intended as a guide to Idaho's used-oil regulations, which are found in 40 CFR § 279 and the Federal Register published September 10, 1992. Both of these publications are available in most libraries and online at

<http://ecfr.gpoaccess.gov> or <http://adminrules.idaho.gov/rules/current/58/0105.pdf> (IDAPA 58.01.05.015).

Used Oil Information Series

This is part of a series of brochures on used oil. Other brochures cover used-oil regulations for generators, marketers, and burners of off-specification used oil.

Used Oil Information Series

This is part of a series of brochures on used oil. Other brochures cover used-oil regulations for marketers, used oil generators, and burners of off-specification used oil.

Printed on recycled paper, DEQ July 2013. PID 0205, CA 30060. Costs associated with this publication are available from the State of Idaho Department of Environmental Quality in accordance with Section 60-202, Idaho Code.

Your Guide to Idaho's Regulations for Transporters of Used Oil

Idaho Department of
Environmental Quality
www.deq.idaho.gov

What is a transporter and a transfer facility?

A transporter is any person who transports used oil, any person who collects used oil from more than one generator and transports the collected oil, and the owner and operator of any used-oil transfer facility.

A used-oil transfer facility includes the following transportation-related facilities:

- Loading docks
- Parking areas
- Storage areas
- Other areas where shipments of used oil are held for more than 24 hours during the normal course of transportation and not longer than 35 days

The regulations governing used-oil transporters and transfer facilities are found in 40 CFR § 279 Subpart E. (IDAPA 58.01.05.015)

What are used-oil fuel marketers?

Used-oil fuel marketers

- direct shipments of off-specification used oil from their facility to a used-oil burner or
- first claim that used oil to be burned for energy recovery meets the specifications set forth in 40 CFR § 279.11

If you meet one or both of these criteria, your facility is subject to regulation under 40 CFR § 279 Subpart H (see the Used Oil Marketer brochure for more information).

Requirements for transporters

Requirements for used-oil transporters and transfer facilities include the following:

- May consolidate or aggregate loads of used oil for purposes of transportation without processing
- Must obtain an EPA identification number and store used oil only in tanks and containers in “good condition” as defined in 40 CFR § 279.22
- Must mark aboveground storage tanks, containers, and fill pipes with the words “USED OIL”
- Must store used oil in areas with oil-impervious flooring and secondary containment structures, such as berms or dikes
- Must clean up any used-oil spills or leaks to the environment
- Must comply with the Department of Transportation regulations, including hazardous materials requirements, where applicable
- May store used oil in transfer facilities for a maximum of 35 days, unless the facility also complies with 40 CFR §279 Subpart F (Standards for Used Oil Processors and Refiners)
- Those who do not recycle used oil, but dispose of it, must comply with 40 CFR § 279.81 (Disposal of Used Oil)
- May NOT process used oil, with the following exception:

Transporters may conduct incidental processing operations that occur in the normal course of used-oil transportation (e.g., settling and water separation). These operations may not be designed to produce (or make more amenable for production) used-oil derived products or used fuel oil.

Minimize waste

The greatest economic and environmental benefit can be realized by reducing the amount of waste produced. Try to reduce the amount of waste you produce first, then look for ways to recycle waste that can't be eliminated.

Used oil may NOT be applied as a dust suppressant at any time (40 CFR § 279.82).
