

Petroleum Risk Evaluation Software Installation Instructions

1. Click on the **Petroleum Risk Evaluation Software** link to download the “setup.exe” file. Save this file to an appropriate directory on your computer.
2. Create a folder where risk evaluation site files will be located. Click on the **Petroleum Risk Evaluation Software Example File** link to download the “test example.risk” file and save to this newly created folder.
3. Double-click on the “setup.exe” file to start the installation process. Click **Yes** to allow the program to install on your computer,
4. Select the radio button to accept the license agreement terms of use and click **Next**.
5. Click **Next** to select the default folder in which the application files will be located.
6. Select whether or not you will want a desktop icon for the application created by checking or unchecking the **Create desktop icon** checkbox and then click **Next**.
7. Click **Finish** to exit the setup process.
8. If a desktop icon was created double-click this icon to start the application. Alternatively, the application can be opened by using the Start Menu option or by double-clicking on a “.risk” file.
9. (Optional) The first time the application is run at the Home screen select the **Choose Existing Evaluation** option, click on the **Browse** button, navigate to the folder in which the “test example.risk” file was saved and select and open this file.
