

3. Permanent vegetation should be maintained on the top and outer slopes of the embankment except where a foot or vehicle path is in use.
4. Woody vegetation should be removed from the embankments, grasses should be mowed, and other vegetation should not be allowed to grow in either of the cells.
5. Floating aquatic weeds must be physically removed on a regular basis.
6. The fence and all gates surrounding the system must be maintained to exclude animals, children, and other unwanted intrusion.

Figure 4-57 shows a cross-sectional view of a TCIS. Figure 4-58 provides an overhead view of a TCIS.
