Page 1 of 5

This summary of North Idaho's air quality is compiled from the various air quality samplers located in the Department of Environmental Quality's Coeur d'Alene Region for the month of July 2015.

The Coeur d'Alene Regional Network encompasses the counties of Boundary, Bonner, Kootenai, Shoshone, and Benewah. The data presented in this report is considered preliminary data and has not been completely evaluated for all quality assurance requirements and is therefore subject to change.

### PM2.5 CONTINUOUS DATA

The graph below displays the average daily 24-hour  $PM_{2.5}$  values for the month and is expressed in micrograms per cubic meter, ( $\mu$ g/m³). These values were calculated by averaging hourly values midnight to midnight from the agency's  $PM_{2.5}$  BAM samplers located in the Cities of Pinehurst, Sandpoint, and St. Maries and on Lancaster Road in Kootenai County. The 24 hour PM2.5 NAAQS is  $35 \mu$ g/m³.

Page 2 of 5

The table below shows the maximum 24 hour values calculated from continuous BAM monitoring for this reporting period. The National Ambient Air Quality Standard (NAAQS) for PM2.5 is 35  $\mu$ g/m³ for a 24 hour average. Depiction of preliminary continuous monitoring data in the table below is for informational purposes only and is considered preliminary data.

Monitoring Site	Highest Reading (µg/m3)	Date
Lancaster BAM 1020	34.2	July 7
Pinehurst BAM	18.3	July 7
Sandpoint BAM	24.9	July 7
St. Maries BAM	21.8	July 8

## PM2.5 FEDERAL REFERENCE METHOD (FRM) DATA

At this time the Coeur d'Alene Regional Office of Idaho DEQ uses the Federal Reference Method Sampler (filter based) measurements for NAAQS compliance determination at the Pinehurst and St. Maries monitoring site. This method requires that 75% of available data be collected per quarter. Other filter processing requirements are applicable to this method. The Coeur d'Alene Regional Office's collection efficiency rate for July is shown in the table below. The collection percentage could change based on quality assurance requirements yet to be completed.

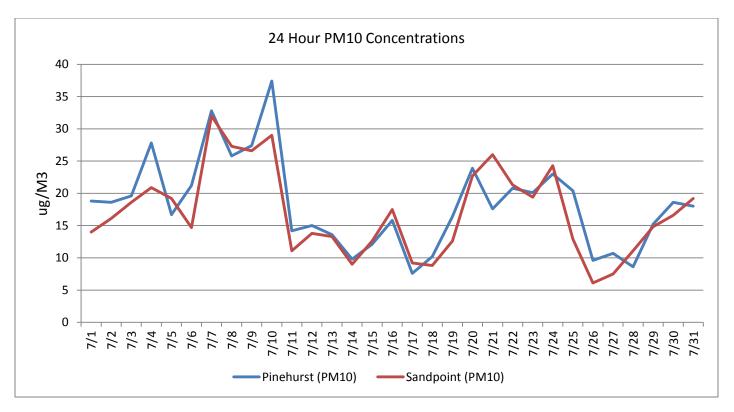

## July FRM filter recovery Efficiency

Site	Sample Days	Valid Samples	Collection Percentage
Pinehurst	31	31	100%
St. Maries	5	5	100%

Page 3 of 5

### PM10 CONTINUOUS DATA

The graph below shows the 24 hour values for PM10. No apparent exceedances of the 150  $\mu$ g/m<sup>3</sup> for a 24 hour average standard have occurred over this reporting period.

### **Air Quality Actions**

A wildfire near Bayview Idaho started the first week in July producing smoke which, combined with smoke from fires in Washington and British Columbia, Canada, began impacting the area and deteriorated air quality. A joint Air Quality Advisory was issued by the Panhandle Health District and DEQ's Coeur d'Alene office due to poor air quality caused by these fires. On Monday July 13 Stage II fire restrictions were put in place in north Idaho due to the continuing hot and dry conditions. Smoke from wildfires continued to intermittently impact air quality throughout the month.

#### **AIR QUALTY INDEX**

The air quality index is a tool used to convey information to the public regarding local levels of air pollution and the associated health concerns. These levels are depicted in the table below.

## Air Quality Index (AQI): Particle Pollution

Index Values	Levels of Health Concern	Cautionary Statements
0-50	Good	None
51-100	Moderate	Unusually sensitive people should consider reducing prolonged or heavy exertion outdoors.
101- 150	Unhealthy for Sensitive Groups	People with heart or lung disease, older adults, and children should reduce prolonged or heavy exertion outdoors.
151- 200	Unhealthy	People with heart or lung disease, older adults, and children should avoid prolonged or heavy exertion outdoors. Everyone else should reduce prolonged or heavy exertion.
201- 300	Very Unhealthy	People with heart or lung disease, older adults, and children should avoid all physical activity outdoors. Everyone else should avoid prolonged or heavy exertion.
301- 500	Hazardous	People with heart or lung disease, older adults, and children should remain indoors and keep activity levels low. Everyone else should avoid all physical activity outdoors.

Below is a table showing the total <u>weekday</u> Air Quality Index (AQI) values for each of the reporting cities located in North Idaho for this reporting month. Differences in totals were due to sampler down time.

### **July 2015**

Coeur d'Alene	Pinehurst	Sandpoint	St. Maries
Green = 19	Green = 22	Green = 23	Green = 21
Yellow = 5	Yellow = 1	Yellow = 0	Yellow = 2
Orange = 0	Orange = 0	Orange = 0	Orange = 0
Red = 0	Red = 0	Red = 0	Red = 0

### 2015 YEAR TO DATE AQI TOTALS

Coeur d'Alene	Pinehurst	Sandpoint	St. Maries
Green = 130(90%)	Green = 101 (69%)	Green =143 (99%)	Green = 96 (72%)
Yellow = 15 (10%)	Yellow = 44 (30%)	Yellow =2 (1%)	Yellow = 37 (28%)
Orange = 0	Orange = 2 (1%)	Orange = 0	Orange = 0
Red = 0	Red = 0	Red =0	Red = 0

For further information about air quality in Idaho and the northwest region visit the following sites on the Internet or contact Ralph Paul, Coeur d'Alene Region Airshed Coordinator, at 208-769-1422.
