Subject: Please invest the VW Settlement Funds on the electrification of Idaho's transportation system through the Beneficiary Mitigation Plan!
Date: Monday, April 2, 2018 10:21:43 AM

Dear Idaho Department of Environmental Quality,

We need to protect Idaho's environment for the benefit of citizens and flora and fauna, alike!

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

Kim Lock

Subject: Please invest the VW Settlement Funds on the electrification of Idaho's transportation system through the Beneficiary Mitigation Plan!
Date: Saturday, March 31, 2018 2:34:02 PM

Dear Idaho Department of Environmental Quality,

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

Maryrose Hollie

Dear Idaho Department of Environmental Quality,

Given the population growth that Idaho is and will continue to see, especially in the Boise and surrounding area, emission control will be increasingly important. I live in Idaho Falls and even here, with the growth that we have experienced, the impact of vehicle emissions is noticeable. I fully agree with and support the use of these settlement funds for electric fuel based projects.

Dear Idaho Department of Environmental Quality,

Electric vehicles have only 1/100th the parts of an internal combustion engine (ICE), and have a correspondingly longer lifetime. Idaho has the power available to power these vehicles, and since transportation is Idaho's largest source of carbon emissions, this will be the biggest step we can take in cleaning our air of many emissions that are not healthy for humans or our planet. Please prioritize funds towards EVs and charging infrastructure, especially DC fast-charging stations, which will be needed to meet demand as EV sales grow exponentially in the next decade.

Dear Department of Environmental Quality Officials,

Dear Idaho Department of Environmental Quality,

I fully support electrified transportation. I recently installed an 8.4kw system on my commercial bldg making it net 0 with enough estimated surplus power to drive a battery EV 10,000 miles annually. Improving rapid charging infrastructure for EV's would go a long way toward cleaning up this state's air quality and promoting a better quality of life for us all.

Thank you,
James Rosenfeld

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

James Rosenfeld

Subject: Please invest the VW Settlement Funds on the electrification of Idaho's transportation system through the Beneficiary Mitigation Plan!
Date: Friday, March 30, 2018 3:55:59 PM

Dear Idaho Department of Environmental Quality,

Let's use this unexpected windfall of dollars to clean up Idaho's air! Clean transportation is a no-brainer!

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

Patricia Rathmann

Dear Idaho Department of Environmental Quality,

We, Idaho residents, recently bought an electric vehicle. It's helping us make a cleaner commute and helps to offset the pollution of many trucks here in Idaho. We could drive it more with fast charging stations throughout the state. Please use this money to help increase the number of electric vehicles on Idaho roads.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

Deirdre Scott

Subject: Please invest the VW Settlement Funds on the electrification of Idaho's transportation system through the Beneficiary Mitigation Plan!
Date: Friday, March 30, 2018 1:12:25 PM

Dear Idaho Department of Environmental Quality,

And perhaps we can get more public transportation vehicles on the ground.

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to other states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Dear Idaho Department of Environmental Quality,

THIS IS IMPORTANT: As utilities are finding, the demand for electricity is falling as greater energy efficiency infrastructure is installed. Utility companies **NEED** to see a rapid growth in electric vehicles to maintain demand for electricity while also cleaning the air, lessening the pace of global warming and saving consumers money.

Dear Department of Environmental Quality Officials,

Dear Idaho Department of Environmental Quality,

If the State of Idaho is spending more than \$56,000,000 annually on gasoline for transportation, then it is way past time for Idaho to start acting fiscally conservatively by moving to much more fuel efficient and economical electric vehicles. In addition to the cost savings over gasoline, electric vehicles reduce both airborne and noise pollution, which in turn saves the state and its citizens huge amounts in pollution mitigation expenses.

Subject: Please invest the VW Settlement Funds on the electrification of Idaho's transportation system through the Beneficiary Mitigation Plan!
Date: Friday, March 30, 2018 11:15:36 AM

Dear Idaho Department of Environmental Quality,

Nationally we are starting to see real progress reducing emissions in the electric power sector. The same trend is not happening in the transportation sector. I drive a Nissan LEAF EV, it's a great commuter car. EVs could be a great step to reduce emissions, and with strategic investments they could quickly play a role as 2nd cars for commuters.

I think it is also important to boost investment in transit and bike infrastructure. Moscow is looking at building its first protected bike lane along east 3rd st. This is good because there is research to show that protected lanes draw more riders and more diverse riders than paint alone. For Moscow it would be a path to connect library, high school, elementary school and via some quite neighborhood streets the middle school and pool. We need more of these key infrastructure investments and the VW funds are a good source for them.

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

Nils Peterson

Dear Idaho Department of Environmental Quality,

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

Dear Idaho Department of Environmental Quality,

I own an electric vehicle and love it! However, the infrastructure isn't what it needs to be in order for me to charge my vehicle when I have longer distance or all day trips driving. Investing in charging networks is the right thing to do for Idaho's future.

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities. Dear Idaho Department of Environmental Quality,

As Idaho's population continues to grow we should also grow infrastructure to support EV's. This will help reduce the adverse effects on human health from increased air pollution caused by fossil fuel vehicles.

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

William Woodward

The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

Erin Leach

Subject: Please invest the VW Settlement Funds on the electrification of Idaho's transportation system through the Beneficiary Mitigation Plan!
Date: Friday, March 30, 2018 9:33:52 AM

Dear Idaho Department of Environmental Quality,

Dear Department of Environmental Quality Officials,

As an Idahoan, I know the importance of our clean air and healthy, active communities communities. To ensure these amazing qualities are preserved well into the future, we have to ensure that Idaho rapidly electrifies our transportation system. I want to urge the DEQ to use the Beneficiary Mitigation Plan to advance the adoption of electric vehicle technologies in the state of Idaho.

I fully support the allocation of 15 percent on building a DC fast charging infrastructure to enable long-distance electric vehicle travel and connect Idaho's electric transportation corridors to others states advancing similar networks. Thank you for making this investment a priority!

With the remaining funds, I would like to see the DEQ define a fuel preference for electricity. Not only do electric vehicles provide the most significant emission reductions over the lifetime of the technology, they also provide the unique opportunity for project beneficiaries to experience reduced operation, maintenance and fuel costs over the lifetime of the vehicle. The experience beneficiaries will gain with new electric vehicles and the massive cost savings realize over time will allow the project beneficiaries to make recurring investments in clean transportation technologies well beyond the timeline of the VW Settlement Funds. This opportunity will provide the largest and longest lasting impact from emission reductions and the transformation of our transportation system. Please consider including this electric fuel preference in each of the project categories like the Plan has already done for airport vehicles.

Thank you!

Sincerely,

John Lee
